Support POST-BARIATRIC HYPOGLYCEMIA Research

PASIPHY Study (**P**asireotide in **P**ost-Prandial **H**ypoglycemia)

PASIPHY is a clinical trial for people living with Post-Bariatric Hypoglycemia (PBH).

It is a double-blind randomized placebo-controlled dose-finding phase II study to assess the efficacy and safety of pasireotide s.c. (a Somatostatin-analogue).

The study is assessing the safety and efficacy of subcutaneous pasireotide (Somatostatin-analogue) in patients who have had bariatric surgery at least six months ago and now experience low blood sugar levels after having meals.

Approximately 23 sites will be initiated in the US and Europe, targeting to enroll 72 patients.

We are inviting physicians in the US, Belgium, France, Italy, Spain, and the UK who are managing PBH patients to speak to us about the PASIPHY study.

For more information, please don't hesitate to contact us via email at medicalinformation-row@recordati.com or visit <https://clinicaltrials.gov/study/NCT05928390>
